REMOTE CONTROL

All vStack-R servers are equipped with an integrated Baseboard Management Controller (BMC) that supports Remote Management and Monitoring IPMI 2.0.

The operation of BMC does not depend on the operating system of the server and provides the following features through a dedicated 1Gb RJ45 port:

- Configure server hardware settings, including BIOS and hardware RAID
- Real-time system status monitoring
- KVM over IP - remote access to the server's graphical console
- Virtual Media - remote connection of virtual media (CD / DVD images) to the server
- Power management: turn on, turn off, reboot
- Display of indications of temperature sensors
- Secure access via SSL
- Multi-user access, including integration with Active Directory
